

Experience the Light Fantastic!™

Put an end to chronic pain at the Back to Health Wellness Center, the premier Deep Tissue Laser Therapy clinic in Illinois.

I'm Dr. Mark Gould of the Back to Health Wellness Center, and if you're a pain sufferer, I'm excited to share with you a simply amazing new technology that reduces and, in some cases, eliminates pain and promotes faster healing.

It's referred to as a Class IV laser (a type of laser that produces heat), and it's the latest therapeutic laser to be fully cleared by the FDA. 1500 times more powerful than the Class III cold lasers used by most health care providers, its effectiveness lies in its ability to penetrate much deeper below the skin, to a depth 3 times that of its weaker Class III cousins. It eliminates pain much faster by assisting the body to repair tissue faster, with no known side effects or risks.

Deep Tissue Laser Therapy is already being used by a number of professional sports teams and is now being used with the U.S. Beijing Olympic athletes to improve performance, reduce pain, and promote faster healing. Back to Health Wellness Center is the first and only health care provider in Illinois to treat patients with this breakthrough technology!

If you suffer with arthritis, lower back or neck pain, joint pain, sprains, strains, repetitive motion injuries, carpal tunnel syndrome, plantar fasciitis, diabetic neuropathy, golfer's or tennis elbow, or many other painful conditions that have not responded to other treatments, the results our patients are getting are nothing short of amazing. Treatment times are short, with relief happening in as little as a few days to just a few weeks.

You know that drugs or steroid injections are not the answer to your chronic pain, and certainly not a long-term solution. Not long ago, a popular pain medication was pulled off the shelves as it was found to cause stroke and heart disease, and other pain medications are being similarly scrutinized. NSAIDS (nonsteroidal anti-inflammatories), such as ibuprofen and naproxen, result in thousands of deaths each year from gastrointestinal bleeding. Steroid injections can have substantial side effects, one of which is they inhibit healing, and can be very costly with limited benefits.

How does the Deep Tissue Laser Therapy work? A Class IV laser penetrates deep into the tissues, delivering a large amount of light energy into the body. When this light reacts with damaged cells, it improves cell respiration and slows nerve conduction for immediate pain relief. Inflammation is reduced and healing is accelerated.

As we age, recover from trauma or surgery, or simply need relief from everyday aches and pains, this advanced technology offers drug-free, surgery-free, pain-free relief. Call Back to Health Wellness Center today for a free consultation with Dr. Gould and start seeing what a joy pain-free living can be!
